## DETAILED ACTION

### *Information Disclosure Statement*

The references not considered on the enclosed 1449 were not in the file. In order for the references to be considered applicant must resubmit the 90 plus references.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 24-25, 27-30, 38 and 40-43 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by the Sato et al. patent (275).

275 teaches first and second substrates [11,12], a liquid crystal layer having a negative dielectric constant [20, see column 6, second paragraph], and a transparent conductive layer over the first substrate, the transparent conductive layer having a first portion and a second portion [14a], the second portion being spaced from the first portion wherein each corresponds to first and second electric fields [see figure 2B for the different electric fields] and a homeotropic alignment layer [16 and column 6]. Regarding the end portion distorting the electric field, this is inherent since as move to the end of the electrode the electric field starts to warp due to the shape of the electrode. The electric field creates the multi-domain configuration, see figure 2B.

Claims 6, 24-30 and 38-43 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by the Soref patent (831).

Regarding the opposite polarity, see figure 2.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over 831. 831 lacks the reflecting electrodes. However, it would have been obvious to one of ordinary skill at the time the invention was made to combine well known reflective electrodes with 831 to decrease power consumption.

***Allowable Subject Matter***

Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Dudek whose telephone number is 308-4782. The examiner can normally be reached on 9:00-5:30.
